Computing

UNIT 4: Software Design and Development Project

Part S

You must have:

Testplan.rtf

Instructions

- This booklet contains material for the completion of the set task under supervised conditions.
- This booklet is specific to each series and this material must only be issued to learners who have been entered to undertake the task in the relevant series.
- This booklet should be kept securely until the start of the 6-hour supervised assessment period and between sessions.
- This set task should be undertaken during the assessment period of 1 week timetabled by Pearson.
- This booklet should not be returned to Pearson.
- Answer **all** activities

Information

- The total mark for this paper is 68.

Pearson

Instructions to Teachers/Tutors and/or Invigilators

This paper must be read in conjunction with the unit information in the specification and the *BTEC Nationals Instructions for Conducting External Assessments (ICEA)* document. See the Pearson website for details.

Refer carefully to the instructions in this task booklet and the *BTEC Nationals Instructions for Conducting External Assessments (ICEA)* document to ensure that the assessment is supervised correctly.

The set task should be carried out under supervised conditions on a computer. An electronic template for use in activities 3 and 4 will be provided for centres to download for candidate use.

The task must be completed using a C family language or Python 3.4 or later version. Access to the offline help files contained within your chosen development environment is permitted.

Centres are free to arrange the supervised assessment period how they wish provided the six hours for producing final outcomes are under the level of control specified, and in accordance with the conduct procedures.

Teachers/tutors and/or invigilators may clarify the wording that appears in this task but cannot provide any guidance in completion of the task.

Teachers/tutors and invigilators should note that they are responsible for maintaining security and for reporting issues to Pearson.

Maintaining Security

- Learners must not bring anything into the supervised environment or take anything out.
- Centres are responsible for putting in place appropriate checks to ensure that only permitted material is introduced into the supervised environment.
- Internet access is not permitted.
- Learner work must be regularly backed up. Learners should save their work to their folder using the naming instructions indicated in each activity.
- During any permitted break, and at the end of the session, materials must be kept securely and no items removed from the supervised environment.
- Learners can only access their work under supervision.
- User areas must only be accessible to the individual learners and to named members of staff.
- Any materials being used by learners must be collected in at the end of each session, stored securely and handed back at the beginning of the next session.

Outcomes for Submission

Each learner must create a folder to submit their work. Each folder should be named according to the following naming convention:

[CentreNumber]_[Registration number]_[surname]_[first letter of first name]

Example: Joshua Smith with registration number F180542 at centre 12345 would have a folder titled

12345_ F180542_Smith_J

Each learner will need to submit 6 PDF documents and 1 .txt document, within their folder, using the file names listed.

Activity 1:

activity1flowchart_[Registration number]_[surname]_[first letter of first name] *as a PDF.*

Activity 2:

activity2pseudocode_[Registration number]_[surname]_[first letter of first name] *as a PDF.*

Activity 3:

activity3testplan_[Registration number]_[surname]_[first letter of first name] *as a PDF.*

Activity 4:

activity4code_[Registration number]_[surname]_[first letter of first name] *as a .txt file and as a PDF.*

activity4testing_[Registration number]_[surname]_[first letter of first name] *as a PDF.*

Activity 5:

activity5evaluation_[Registration number]_[surname]_[first letter of first name] *as a PDF.*

An authentication sheet must be completed by each learner and submitted with the final outcomes.

The work should be submitted no later than 18 January 2023.

Instructions for Learners

Read the set task information carefully.

This contains all the information you need to complete each activity within the set task.

Plan your time carefully to allow for the preparation and completion of all the activities.

Your centre will advise you of the timing for the supervised period. It is likely that you will be given more than one timetabled session to complete these tasks.

Internet access is not allowed.

You will complete this set task under supervision and your work will be kept securely at all times.

You must work independently throughout the supervised assessment period and should not share your work with other learners.

You may use a calculator and will have access to a computer. All activities should be completed using a computer.

Your teacher/tutor and/or invigilator may clarify the wording that appears in this task but cannot provide any guidance on completion of the task.

The task must be completed using a C family language or Python 3.4 or later version.

You will have access to the offline help files contained within your chosen development environment.

Outcomes for Submission

You must create a folder to submit your work. Your folder should be named according to the following naming convention:

[CentreNumber]_[Registration number]_[surname]_[first letter of first name]

Example: Joshua Smith with registration number F180542 at centre 12345 would have a folder titled

12345_ F180542_Smith_J

You will need to submit 6 PDF documents and 1 .txt document, within your folder, using the file names listed.

Activity 1:

activity1flowchart_[Registration number]_[surname]_[first letter of first name] *as a PDF.*

Activity 2:

activity2pseudocode_[Registration number]_[surname]_[first letter of first name] *as a PDF.*

Activity 3:

activity3testplan_[Registration number]_[surname]_[first letter of first name] *as a PDF.*

Activity 4:

activity4code_[Registration number]_[surname]_[first letter of first name] *as a .txt file and as a PDF.*

activity4testing_[Registration number]_[surname]_[first letter of first name] *as a PDF.*

Activity 5:

activity5evaluation_[Registration number]_[surname]_[first letter of first name] *as a PDF.*

You must complete an authentication sheet before you hand your work into your teacher/tutor and/or invigilator.

Set Task Brief

You are asked to use your software design, development, testing and evaluation skills to produce a program that meets the client's requirements.

A local company that specialises in supercar experience days has employed you to write a program that will help its staff calculate the cost of supercar experiences for their customers. The supercar experiences allow customers to drive their dream car around a racetrack for a set number of laps. The cost of a supercar experience is calculated using the number of cars driven, which cars are chosen and whether any additional laps are required.

You need to create a program that will allow the staff to enter this information:

- customer's name, address and phone number
- the number of cars the customer would like to drive – maximum of 5
- which cars the customer would like to drive
- the number of additional laps (if required).

The program should then provide a personalised and itemised bill showing:

- the customer details
- a breakdown of costs
- the total cost of the experience.

You will design, implement and test your program. You must also justify and evaluate your decisions.

When you are designing and developing the solution ensure that:

- standard programming conventions have been followed
- it is efficient and robust
- it is user friendly
- it provides accurate calculations
- all currency values are displayed to two decimal places
- there is output to show:
 - customer details
 - the total number of cars chosen
 - which cars were chosen
 - the total number of additional laps (if applicable)
 - the total cost.

Information

You are provided with information to use when designing and developing your program:

- price list
- additional lap cost.

Price list

Car	Cost for 3 laps
Lamborghini Gallardo	£59
Lamborghini Huracan	£59
Ferrari F40	£49
Porsche Boxster	£39
Audi A5	£39
BMW i8	£39
Lotus Elise	£30

Additional lap cost

Each additional lap costs £15

Set Task

You must complete ALL activities within the set task.

Produce your documents using a computer.

Save your documents in your folder ready for submission using the formats and naming conventions indicated.

Activity 1

Produce a flowchart, using British Computing Society symbols, to plan the logic and processes for the program.

Save your flowchart as a PDF in your folder for submission as

activity1flowchart_[Registration number]_[surname]_[first letter of first name]

You are advised to spend 1 hour and 10 minutes on this activity.

(Total for Activity 1 = 10 marks)

Activity 2

Produce pseudocode that a software developer could use to create the program.

Save your pseudocode as a PDF in your folder for submission as

activity2pseudocode_[Registration number]_[surname]_[first letter of first name]

You are advised to spend 1 hour and 10 minutes on this activity.

(Total for Activity 2 = 10 marks)

Activity 3

Use the document **testplan.rtf** to plan the testing of your complete program.

You should complete these columns:

- Test number
- Purpose of test
- Test data
- Expected result.

You will need to save this file so that you can complete the testing in activity 4.

Save your test plan as a PDF in your folder for submission as

activity3testplan_[Registration number]_[surname]_[first letter of first name]

You are advised to spend 35 minutes on this activity.

(Total for Activity 3 = 6 marks)

Activity 4

Use your flowchart, pseudocode and test plan to help write and test your program.

You should:

- write a program that meets the scenario requirements
- use a C family language or Python 3.4 or later version
- test your solution throughout the development process to ensure that it functions as expected
- record the outcomes of your testing and any actions taken in your test plan document.

Your evidence should include:

- a copy of your code containing annotations/comments
- a copy of your fully completed test plan document.

Save your code as a PDF and as a .txt file in your folder for submission as
activity4code_[Registration number]_[surname]_[first letter of first name]

Save your testing document as a PDF in your folder for submission as
activity4testing_[Registration number]_[surname]_[first letter of first name]

You are advised to spend 2 hours and 20 minutes on this activity.

(Total for Activity 4 = 30 marks)

Activity 5

Evaluate your program solution.

You should cover:

- how well your solution meets the requirements of the scenario
- the quality and performance of your program
- the choices you made about coding conventions
- the changes you made during the development process.

Save your evaluation as a PDF in your folder for submission as
activity5evaluation_[Registration number]_[surname]_[first letter of first name]

You are advised to spend 45 minutes on this activity.

(Total for Activity 5 = 12 marks)

TOTAL FOR TASK = 68 MARKS
